

Controlled Release Fertilizer

A *smarter* source of nitrogen
A *smarter* way to grow

Facts From the Field

For Superior Performance and Application Flexibility, ESN Is the Smart Nitrogen for Winter Wheat

In a University of Missouri study, ESN and ESN blends consistently produced top wheat yields for all application times from October to April.

- ESN can be blended with urea or ammonium sulfate for a one-pass N management program.
- ESN can be applied whenever conditions are suitable.
- ESN ensures you get the most from your N investment.
- ESN's patented polymer coating protects N from loss and ensures maximum flexibility in N application timing
- Your N stays protected inside the coating and is released when needed by the crop.

ESN can be used alone or in combination with other soluble fertilizers for a wider window of application. The chart below shows recommended blends for specific application timing.

		Application Timing						
N source	Ratio (%)	Oct	Nov	Dec	Jan	Feb	Mar	Apr
ESN	100		■	■	■			
<u>ESN:Urea</u>	75:25				■	■	■	
<u>ESN:Urea</u>	50:50							■
Urea	100							■
